Muhammad Umar Ramadhana

Jakarta,Indonesia | umarkotak@gmail.com | mumarr.vercel.app | github.com/umarkotak

Summary

Software engineer with 7+ years of experience building and operating production systems across entertainment, hospitality, advertising, and consumer platforms. Actively involved in end-to-end product delivery.

Professional Experience

Contract, Full Stack Engineer
Alakin Health | February 2026 – Present

- Built an AI coach feature using AWS Bedrock and integrated it with user health data.
- Developed a marketplace for health training and workshop providers.

Part Time, Back End Engineer
Sanafi | September 2025 – March 2026

- Integrated Rain.xyz stablecoin-backed card functionality into the Sana app.
- Reworked centralized transaction history covering crypto transactions and virtual card transactions.
- Integrated Bridge.xyz to support crypto on-ramp and off-ramp flows.

Lead Back End Engineer
Everywhere.ID | September 2023 – December 2025

- Providing online-to-offline interactive entertainment and advertising platforms connecting content creators with physical venues and digital screens.
- Involved with product delivery from requirement gathering, designing solutions, development and delivering products.
- Designed and improved event and ads scheduling systems, enabling ads to run during or outside live streams in multiple formats.
- Integrated programmatic advertising across 1,000+ connected screens, expanding monetization opportunities and advertiser reach.
- Supported business growth by enabling advertising features used by 30+ clients.
- Migrated infrastructure from GCP to Tencent Cloud, then simplified deployment from Tencent Kubernetes Engine to VM-based infrastructure, reducing monthly cost from approximately $10,000 to $600.
- Implemented a self-managed ELK stack, reducing logging cost from approximately $300/month to $0.

Back End Engineer
GoPlay, GoTo | July 2020 – September 2023

- GoPlay was GoTo's entertainment platform for video-on-demand and interactive live streaming for Indonesian creators.
- Designed and migrated authentication from phone-number-based login to multi-provider login using Google, Facebook, and Apple accounts.
- Built an end-to-end creator monetization flow, from audience virtual gifting to creator withdrawal into bank accounts.
- Developed an in-house user action tracking system to support behavioral analytics and product experimentation.
- Built mission-based gamification features to improve user engagement and retention.
- Contributed to the platform shift from video-on-demand toward interactive live streaming and creator economy features.

Back End Engineer
GoLife, GoTo | May 2018 – July 2020

- GoLife was GoTo's lifestyle service platform, supporting services such as GoMassage and GoClean with thousands of daily active users and high weekend order concurrency.
- Designed and maintained backend services for GoLife's service marketplace, enabling partners to list services, accept bookings, and process payments.
- Developed core product features including: booking flow, notifications, product discovery, address history, reviews, discounts, vouchers, and operational alerting.
- Improved engineering collaboration by introducing technical documentation as a source of truth for architecture discussions and implementation decisions.
- Supported backend operations for high-traffic consumer services across products: cleaning, massage, beauty, and automotive categories.

Skills

- Golang, Ruby, Javascript, Python
- Postgresql, Mongodb, Redis, Kubernetes, GCP, AWS, Tencent, Gitlab, CI/CD

Projects

cabocil.com
A self-hosted educational platform for children, combining curated videos, quizzes, digital books, activity tracking, and problem-solving games. Reached 50+ daily active users, total 4,000+ unique visitors, and total 60,000+ page views as of June 2026.
